Professional Summary

Motivated front-end developer with hands-on experience building responsive web applications using HTML, CSS, JavaScript, and React. Currently expanding expertise with modern frontend workflows. Known for quick learning, debugging skills, and an ability to translate and communicate ideas into functional, user-friendly interfaces.

Experience

Project: React Online Library

October 2025

Frontend Software Engineer

- Drafted extremely clean and reusable code to create an online library, built with React.
- Boasts an impressive catalog of books, featuring their images, ratings, and prices fetched through an API. Allows for sorting based on price and rating.
- Utilizes custom color-themed images.
- Responsive to varying display and browser sizes.

Project: Movie Catalogue

October 2025

Frontend Software Engineer

- Drafted extremely clean and reusable code to create an online movie catalog.
- Simple HTML and CSS design with a focus on demonstrating JavaScript and API expertise.
- Search feature fetches a plethora of films using an API with chronological sorting functionality.

Project: React Templates (Treact) Website

September 2025

Frontend Software Engineer

- Drafted extremely clean and reusable code to create a sample website for React templates.
- Displays custom color-themed images spanning multiple sections, and presents a comprehensive amount of information over an eye-pleasing layout.
- Responsive to varying display and browser sizes.
