Professional Summary

Motivated front-end developer with hands-on experience building responsive web applications using HTML, CSS, JavaScript, and React. Currently expanding expertise with Firebase. Known for quick learning, debugging skills, and an ability to translate and communicate ideas into functional, user-friendly interfaces.

Experience

Skinstric AI – Virtual Internship (View Project) – (GitHub)
- A sleek, modern website, built with **React, Javascript, HTML, and CSS** best practices.
- Designed as the main website for Skinstric.ai, an AI-powered skincare startup.
- Takes users through facial analysis and offers photo capturing and uploading features, providing AI-predicted results.
- Responsive to varying display and browser sizes.

Ultraverse NFT Marketplace (View Project) – (GitHub)
- Created an online NFT Marketplace, built with **React, Javascript, HTML, and CSS** best practices.
- Presents a comprehensive array of NFTs, deals, and authors over an eye-pleasing layout, with the data fetched through multiple APIs.
- Responsive to varying display and browser sizes.

Netflix Clone (View Project) – (GitHub)
- Created a Netflix clone, built with **React, Firebase, Javascript, HTML, and CSS** best practices. Features numerous arrays of current films based on different criteria.
- Displays respective movie trailers upon selecting a film, utilizing multiple APIs.
- Collects login information and authenticates users with created accounts.

"Reelz" App (Movie Catalogue) (View Project) – (GitHub)
- Created a movie catalogue, built with **React, Javascript, HTML, and CSS** best practices. Search feature fetches a plethora of films using multiple APIs with chronological sorting functionality.
- Utilizes custom color-themed images.
- Displays comprehensive movie info for each search result.
